Provided the speed of rotation is uniform for the short interval of time necessary to get a sequence of four notes as in (a) or (6), it will be found that at all speeds the sequence obtained is the same, and constitutes the common chord on the note of lowest pitch as tonic. This experiment shows that the difference in pitch or the interval between any two notes is determined, whatever may be the individual frequencies of the notes, by the ratio of their frequencies. In the experiment the ratio of the frequencies of the four...
